

NEWS RELEASE

Telestream Rips Up Rulebook with Launch of Lightspeed Live Capture C2

New dual channel ingest solution provides unbeatable value: lowest cost access to capture plus Vantage media processing

Nevada City, California, June 16, 2020 – [Telestream](#)[®], a leading provider of workflow automation, media processing, quality monitoring and test and measurement solutions for the production and distribution of video, has announced the immediate launch of a new two-channel version of its [Lightspeed Live Capture](#) system. Aggressively priced, Lightspeed Live Capture C2 offers a fully featured dual channel ingest solution that is ideal for enterprise-scale workflows such as news and professional sports, which rely on remote production and editing capabilities.

Although it is the little brother of the Lightspeed Live family, Capture C2 reflects all of the media processing power and workflow automation sophistication that the company has pioneered in recent years. With this development, the workflows for ingest and media processing that are used for large scale events are now viable for the smaller and less complex instances.

The new dual-channel ingest solution captures two concurrent HD inputs up to 1080p60 while at the same time generating a low-res proxy of the content. Supporting all major HD codecs, the server provides powerful production tools, such as simultaneous edit-while-capture, transcode-while-capture and deliver-while-capture.

Telestream's Lightspeed Live Capture is the only capture portfolio that supports all the common formats, HDR, VTR digitizing, remote production, IP input and delivery to Avid systems, without hardware changes and without compromising capacity. Now, the company has integrated this new server system alongside its flagship software-based Vantage Media Processing Platform with dramatic effect. For the first time, the Vantage for Capture option adds world-class transcoding that runs directly on the Lightspeed Live Capture C2 server alongside Live Capture, Live Stream, Avid integration and more.

Lightspeed Live Capture C2 is the product of a major development initiative within Telestream: it marries best in class ingest and media processing capabilities and unmatched value for money. Today, Lightspeed Live Capture C2 represents one of the lowest cost ways to buy Vantage and Live Capture together.

The Capture C2 box offers all the software features and functions of larger-scale systems in an economical 2-channel hardware configuration. These facilities include Live Edit sub-clipping of live and growing capture files using an HLS proxy embedded in a user-friendly web-based UI. In addition, Live Play enables live confidence monitoring for QC, and playback from customized playlists. And thirdly, Live Schedule automatically schedules events for capture using an easy to use web-based UI.

“Lightspeed Live Capture C2 is a game-changer product that flies in face of convention since it empowers users with all the power and creative potential that Vantage offers on a 2 channel capture server,” stated Scott Matics, Senior Director of Product Management at Telestream. “We believe in enabling broadcast and media professionals with technology that makes a difference where it matters – Lightspeed Live Capture C2 makes all the high-end use cases available to everyone.”

Lightspeed Live Capture C2 is available globally with immediate effect. For more product information, pricing options and sales contacts, go to www.telestream.net/lightspeed-live/lightspeed-live-capture.htm
