# Live Schedule Pro

Product Sheet

Live Schedule Pro

24/7/365 Scheduling for Lightspeed Live Capture

Overview

Live Schedule Pro gives production teams full control over their live ingest workflows. Designed for broadcast operation environments searching for a powerful, centralized solution for 24/7 scheduling with optional router control, Lightspeed Live Capture's Live Schedule Pro option also enables live edit workflows for growing files in post production.

Lightspeed Live Capture's Live Schedule Pro software has a client/server architecture, with an easy-to-use web-based user interface. Configure ingest events to simultaneously capture high-resolution media and low-resolution proxies for all input formats supported by Lightspeed Live Capture.

Live Schedule Pro Features

- Live video and audio channel preview

- Schedule events on a standalone server or multiple-server capture domain

- Supports single and recurring events

- Crash Record and Gang Record

- Configurable web-based user interface
  - o Channel grouping support
  - o Horizontal and Vertical modes

- Dynamically lengthen or shorten actively-recording events

- Metadata input for downstream workflows
  - o Update Avid metadata during record

- Powerful REST API support

- Integration with Telestream GLIM for open file clip extraction and highlight generation

- Industry-proven Avid Media Central integration via Vantage
  - o Powering live edit workflows for growing files

- Extensive router control support (via integration with Rascular RouteMaster)
  - o SDI
  - o ST 2110 (Via SDVN)
